

Can I Connect to Public Sewer?

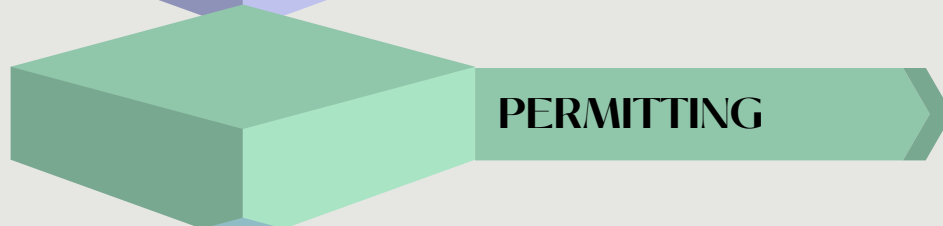

Use this guide to determine if you are able to connect to our public sewer system.

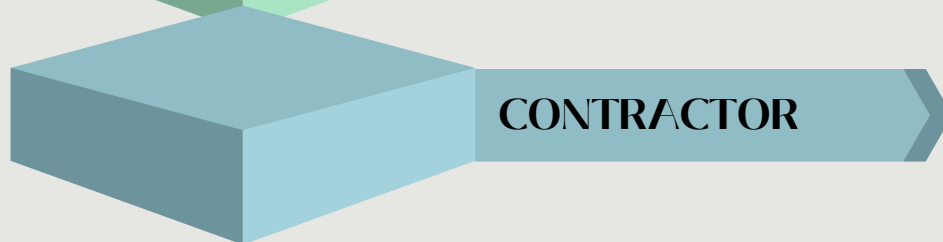

Review our sewer map [here](#). If your property is highlighted or directly adjacent to a highlighted area, connection may be feasible.

Hire an engineer to assess the ability to connect and create maps and any other documents needed for permitting.

Depending on your project, permits required may include sewer lateral, sewer tapping, grading and Highway Occupancy.

Have a licensed and registered contractor complete the permitted work.
